

Summary

Preface	III
List of abbreviations	V
Foreword	XI

Chapter 1 **Introduction**

1.1. General objectives of the book	1
1.2. Structure of the book.....	3
1.3. Objectives and approach of R&D on core melt accidents	4
1.3.1. Objectives.....	4
1.3.2. International R&D	5
1.3.3. Approach.....	7

Chapter 2 **Design and Operation of a Pressurised Water Reactor**

2.1. General information about reactor operation.....	11
2.2. The pressurised water reactors in France's nuclear power plant fleet	13
2.3. Description of a pressurised water reactor and its main loops	18
2.3.1. Facility overview	18
2.3.2. Description of the main components of a PWR	21
2.4. Reactor operation under normal and accident conditions	33
2.4.1. Systems used under normal reactor operating conditions.....	33

2.4.2. Systems used under reactor incident or accident conditions.....	35
2.5. Reactor control under normal and accident conditions.....	38
2.5.1. Control room.....	38
2.5.2. Reactor control.....	39
2.6. Conclusion.....	42

Chapter 3

Safety Principles for Pressurised Water Reactors in the French Nuclear Power Plant Fleet

3.1. Introduction.....	43
3.2. Concept of defence-in-depth.....	44
3.3. Role of the probabilistic approach.....	47
3.4. Conclusion.....	48

Chapter 4

Safety Principles for France's Pressurised Water Reactors

4.1. Concept of severe accident.....	51
4.2. Accident scenarios that may lead to core melt.....	52
4.2.1. Description of PSA level 1 accident scenarios.....	52
4.2.2. Melt frequencies by scenario type determined by the level 1 PSA for the 900 MWe reactors.....	59
4.2.3. Accident progression beyond core melt.....	60
4.3. General progression of core melt accidents and their management at reactors in operation in France and for EPR.....	60
4.3.1. Physics of core melt and associated phenomena.....	60
4.3.2. Containment failure modes.....	67
4.3.3. Management of core melt accidents at PWRs in operation in France	69
4.3.4. Approach adopted for EPRs.....	81
4.4. Level 2 PSAs: method and lessons from core melt accidents.....	86
4.4.1. Methods of conducting level 2 PSAs.....	88
4.4.2. Applications of level 2 PSAs in France.....	92
4.4.3. Conclusion on level 2 PSAs.....	98

Chapter 5

Development of the core melt accident

5.1. Development of the accident in the reactor vessel.....	101
5.1.1. Progression of the core melt in the reactor vessel.....	101
5.1.2. Corium behaviour in the lower head.....	111

5.1.3. Reactor vessel failure	120
5.1.4. High-pressure core melt	127
5.2. Phenomena liable to result in early containment failure.....	146
5.2.1. Direct containment heating	146
5.2.2. Hydrogen risks and means of mitigating their consequences.....	161
5.2.3. Steam explosions.....	177
5.3. Phenomena that could lead to delayed containment failure: Molten Core-Concrete Interaction (MCCI).....	200
5.3.1. Introduction.....	200
5.3.2. Physical phenomena involved	200
5.3.3. Experimental programmes.....	203
5.3.4. Computer modelling and simulation software.....	209
5.3.5. Application to a power reactor.....	213
5.3.6. Summary and outlook.....	217
5.4. Retention and cooling of corium inside and outside the reactor vessel.....	222
5.4.1. In-vessel corium retention	222
5.4.2. Cooling of corium under water during MCCI.....	233
5.4.3. Corium spreading for the EPR.....	241
5.5. Release of fission products during a core melt accident	255
5.5.1. Inventory and relative importances of FPs	256
5.5.2. Release of FPs into the reactor vessel	259
5.5.3. Fission product transport in the reactor coolant system and secondary loops (fission gases excluded).....	269
5.5.4. Ex-vessel fission product releases.....	274
5.5.5. Behaviour of aerosols in the containment.....	275
5.5.6. Fission product chemistry	278
5.5.7. Conclusion.....	293

Chapter 6

Behaviour of Containment Buildings

6.1. Introduction.....	301
6.2. Behaviour of containment buildings under design-basis conditions	303
6.2.1. Single wall containment buildings (900 MWe reactors).....	304
6.2.2. Double-wall containment buildings (1300 and 1450 MWe reactors).	306
6.2.3. Double-wall containment on the EPR	307
6.2.4. Monitoring the integrity and leak tightness of containment buildings.....	308

6.3. Mechanical behaviour of containments in the event of a core melt accident ...	311
6.3.1. Introduction.....	311
6.3.2. Mechanical behaviour of the containments of 900 MWe PWR power plants.....	311
6.3.3. Mechanical behaviour of the containments of 1300 MWe PWR power plants.....	322
6.3.4. Summary and outlook concerning studies performed by IRSN regarding the mechanical behaviour of containment buildings under core melt accident conditions	326
6.4. Containment bypass.....	327
6.4.1. Introduction.....	327
6.4.2. Possibilities for containment bypass.....	329
6.4.3. Types of containment bypass that could occur during reactor operation	330
6.4.4. Types of containment bypass that could occur during a design-basis accident.....	331
6.4.5. Types of containment bypass that could occur during a core melt accident.....	332
6.5. Conclusion.....	334

Chapter 7

Lessons Learned from the Three Mile Island and Chernobyl Accidents and from the Phebus FP Research Programme

7.1. Lessons learned from the Three Mile Island accident.....	337
7.1.1. Introduction.....	337
7.1.2. Accident and core-degradation sequence.....	339
7.1.3. Environmental and public health consequences of the accident.....	348
7.1.4. Lessons learned from the accident with regard to the physics of core melt accidents	349
7.1.5. Lessons learned from the accident for the safety of French nuclear power plants.....	350
7.1.6. Conclusion.....	355
7.2. Lessons learned from the Chernobyl disaster.....	356
7.2.1. Introduction.....	356
7.2.2. Accident sequence, releases and consequences.....	357
7.2.3. Lessons learned in France regarding safety	365
7.2.4. Lessons learned in France regarding "nuclear crisis" management.....	366
7.2.5. Conclusion.....	367

7.3. The Phebus FP programme	367
7.3.1. Background	367
7.3.2. Description of the Phebus FP test setup and test matrix.....	368
7.3.3. Main lessons regarding fuel rod degradation.....	370
7.3.4. Releases from the core	374
7.3.5. Transport of fission products and aerosols in the RCS.....	377
7.3.6. Thermal-hydraulics and aerosol behaviour on the containment vessel.....	379
7.3.7. Iodine chemistry in the containment vessel	380
7.3.8. Use of Phebus FP test results in safety analyses	383

Chapter 8

Numerical Simulation of Core Melt Accidents

8.1. Integral and mechanistic computer codes	389
8.1.1. Integral codes.....	390
8.1.2. Mechanistic codes	393
8.2. General approach to code development and validation	394
8.2.1. Code development.....	394
8.2.2. Code validation	394
8.3. ASTEC.....	396
8.3.1. Capabilities.....	397
8.3.2. Validation status mid-2015	399
8.3.3. ASTEC upgrade prospects	401
8.4. MAAP.....	401
8.4.1. Capabilities.....	402
8.4.2. Validation status mid-2015	404
8.4.3. MAAP upgrade prospects	405
8.5. MELCOR	405

Chapter 9

Conclusion
