Preface	III
Main contributors	V
List of abbreviations	VII
Foreword	XV

Chapter 1

Introduction

Part 1

General overview of research reactors at international level

Chapter 2

The different types of research reactors, overall global situation, uses and associated risks

2.1. Types of research reactors.....	7
2.2. Global situation.....	13
2.2.1. Statistical data.....	13
2.2.2. General nuclear safety and non-proliferation issues.....	14
2.3. Uses of research reactors and main related risks.....	18
2.3.1. Training.....	18
2.3.2. Fundamental research.....	18

2.3.3. Experimental irradiation.....	19
2.3.4. Medical applications.....	22
2.3.5. Activation analysis.....	23
2.3.6. Industrial applications.....	24

Chapter 3

Aspects of the design and safety demonstration of research reactors at international level

3.1. Convergence of practices on a few main safety objectives, principles and safety approaches.....	25
3.2. The IAEA safety standards.....	26
3.2.1. Drafting process of the IAEA safety standards.....	27
3.2.2. Structure of the IAEA safety standards.....	28
3.2.3. Brief presentation of the safety standards for research reactors.....	29
3.2.4. Application of the IAEA safety standards.....	31
3.2.5. Supporting documents for application of the IAEA safety standards.....	32
3.3. IAEA exchange and assessment mechanisms.....	33
3.4. Some general principles and approaches related to safety.....	33
3.4.1. Organization of safety control, safety culture.....	33
3.4.2. Confinement barriers, fundamental safety functions, defence in depth.....	36
3.4.3. The deterministic approach, design and safety demonstration basis – Situation regarding probabilistic studies for research reactors.....	41
3.4.4. The graded approach.....	42
3.5. Periodic safety reviews.....	43
3.6. Safety aspects of experimental devices.....	45
3.7. “Envelope” accidents taken into account in research reactor safety analyses.....	47
3.7.1. Definition and characteristics of “envelope” accidents.....	47
3.7.2. Source term evaluation for “envelope” accidents.....	49
3.8. Possible improvements to studies, research and development on research reactor safety.....	50

*Chapter 4***International experience feedback for research reactors**

4.1. The IAEA incident reporting system (IRSRR).....	60
4.2. Serious incidents and accidents at research reactors.....	61
4.3. Complementary safety assessments carried out internationally following the accident at the Fukushima Daiichi nuclear power plant.....	63

*Part 2***Research reactors in France***Chapter 5***Evolution of the French research reactor "fleet"**

5.1. The diversity and complementarity of French research reactors	71
5.2. Current situation	77

*Chapter 6***Stakeholders and organization of research reactor safety in France**

6.1. Operators.....	96
6.2. Control of nuclear risks in France.....	97
6.3. Key stages in the life of a research reactor.....	105
6.4. Internal licensing scheme	107

*Chapter 7***Safety principles for French research reactors**

7.1. General safety principles, concepts, approaches and objectives.....	109
7.1.1. The defence in depth principle applied to research reactors.....	112
7.1.2. Events selected for the design and safety demonstration of research reactors.....	116
7.1.3. Reference accidents	120
7.1.4. Application of general safety objectives.....	121
7.1.5. The graded approach in France.....	122
7.2. Specific safety features of research reactors.....	122
7.2.1. Power densities, fuel and core neutron characteristics.....	122
7.2.2. Usage rates.....	127
7.2.3. Organisational and human factors.....	128

7.3.	Features of research reactors by main safety function	130
7.3.1.	Controlling core reactivity	130
7.3.2.	Cooling the reactor	132
7.3.3.	Confinement of radioactive substances	137
7.3.4.	Criticality risks	139
7.4.	Hazards	141
7.4.1.	Internal hazards	141
7.4.2.	External hazards	144
7.5.	Experimental devices and research reactor-specific equipment	151
7.6.	Radiological protection and waste substances	153
7.6.1.	Radiological protection	153
7.6.2.	Waste liquids and gases	156
7.7.	Emergency preparedness and management (crisis management)	156
7.8.	Safety aspects for decommissioning research reactors	159

Chapter 8

The reference accidents selected for French research reactors

8.1.	Definition and examples	161
8.2.	BORAX-type accident – main aspects	164
8.2.1.	Accident at the SL-1 reactor	164
8.2.2.	Key lessons learned from the SL-1 reactor accident	166
8.2.3.	Consideration of the BORAX-type accident in France	167
8.3.	Demonstrative testing conducted in France	172

Chapter 9

Maintaining compliance with the applicable requirements - Safety Reviews

9.1.	Maintaining compliance with the applicable requirements, managing obsolescence and ageing	177
9.2.	Safety reviews	178

9.2.1. History and approach	178
9.2.2. Examples of significant safety reviews.....	180

Chapter 10

Operating experience feedback from French research reactors

10.1. Trends, some notable events and their management.....	187
10.1.1. Trends.....	187
10.1.2. Some notable events and their management.....	189
10.2. Measures to improve the safety of French research reactors following the Fukushima Daiichi accident.....	206

Chapter 11

**Overview of simulation software used in
design studies and safety analyses for French research reactors**
